New Study on Air Fares reveals the real determinants of airline ticket pricing

For immediate release  3 May 2018

Brussels, 3 May 2018: This afternoon, at the 2nd ACI EUROPE Airport Investment Symposium, a new Study was released providing fresh insights into the evolution and logic of air fares and airline ticketing.

The study, entitled Identifying the Drivers of Air Fares and produced by Global consultancy, ICF was commissioned by ACI EUROPE with a view to gaining an independent analysis of the real world determinants of air fares. It follows a sustained campaign by some airlines, which contend that reductions in airport charges would be passed-through directly to passengers in lower air fares.

RESPONSE TO AIRLINES’ ACCUSATIONS ABOUT AIRPORT CHARGES

Kata Cserep, Vice President at ICF said “ICF finds that while airport charges do influence airlines’ behaviour when it comes to where they chose to develop their route network and deploy their capacity, there is no one-for-one correspondence between airport charges – and any change in their level – and air fares. In other words, lower airport charges are generally not passed-through to passengers in lower air fares”.

Dr Michael Kerkloh, President of ACI EUROPE and CEO of Munich Airport commented “The new ICF Study spells it out very clearly that the underlying demand and the level of competition between airlines on any given air route are the key determinants of air fares. This means that airlines will always aim to exercise their pricing power irrespective of the underlying costs of providing the service.”

ICF’s analysis notes how the static nature of airport charges, which are set well in advance and do not vary for long periods of time, contrasts with the extremely dynamic pricing techniques used by airlines to set air fares. This results in constant and significant ticket price variations, which can reach up to 700% for the same product.

FOOD FOR THOUGHT REGARDING AIRLINE CONSOLIDATION

Even more interestingly, the illustrative searches undertaken within the study also found that ticket prices on monopoly airline routes are consistently more expensive than those on routes served by two or more competing airlines – further proof of the disconnect between airport charges and air fares.

With airline consolidation set to further develop in Europe in the coming years, the ICF study provides an insight into the risks inherent in having fewer airlines expanding their market share.

IT’S 2018: PASSENGER INTEREST SHOULD BE THE FOCUS

Olivier Jankovec, Director General ACI EUROPE said “Two years ago, some of Europe’s most powerful airlines mounted this campaign against airport charges, while posting record profits. We have responded with constructive and transparent analyses – 1) of airport investment and what it has delivered for consumers, 2) of airport competition and how it is evolving in line with new market dynamics and now 3) of air fares, with proof that changes in airport charges are not passed-through to consumers.”
He concluded “It all comes down to this – in 21st century air transport, airlines’ interest should not be assumed to coincide with passengers’ interest. The airlines’ campaign should now be seen for what it is really about: boosting their bottom lines. The passenger-centric approach of the EU Aviation Strategy is the way forward – not the airline-centric approach of the past.”

Demand for air transport in Europe is expected to keep growing - with ACI forecasting passenger traffic at Europe’s airports to increase from 1.93 billion passengers in 2015 to 4.78 billion by 2040.

Notes to Editors

ACI EUROPE’s synopsis Insights into the Logic of Air Fares can be downloaded here: https://www.aci-europe.org/component/downloads/downloads/5476.html

1. The event took place in Brussels and brought together a wide range of top institutional & industry stakeholders - including DG MOVE Director General Henrik Hololei, Deirdre Clune MEP, airport CEOs, private investors, airlines and others.

2. Between 2005 and 2015, the top 21 EU & EFTA airports invested more than €53 billion back into their facilities. This investment delivered capacity for an extra 178 million passengers to pass through these airports each year– the equivalent of adding an extra London-Heathrow, Paris-Charles de Gaulle and Paris-Orly to the European aviation network. This additional capacity allowed these airports to increase their total connectivity by +51.6%, while it also resulted in a +12.4% boost to passenger satisfaction. ACI EUROPE is the European region of Airports Council International (ACI), the only worldwide professional association of airport operators. ACI EUROPE represents over 500 airports in 45 European countries. Our members facilitate over 90% of commercial air traffic in Europe: 2 billion passengers, 20 million tonnes of freight and 23.7 million aircraft movements in 2016. These airports contribute to the employment of 12.3 million people, generating €675 billion each year (4.1%) of GDP in Europe.

EVERY FLIGHT BEGINS AT THE AIRPORT.
